Recommendation – RCP Construction (Markuciai Norge AS)

RCP Construction that is a subsidiary to Markuciai has assembled the concrete elements on our project "Skansekaia", Ålesund. Markuciai has delivered the elements and another subsidiary (Concretus Design) was responsible for the designing.

Skansekaia is a project of precast basement of about 7.000 m² (executed by other companies) and 3 buildings from 3 to 5 floors; total 17.000 m².

RCP have done an excellent work with great quality, well organized, professional and a high standard and work culture. For HENT AS the safety part is very important and RCP showed a high priority on that part as well.

The project was not easy. Because of the location (to the sea) and weather condition in Ålesund can also be quite tough. RCP made the necessary adjustments so we did not get any delays. The assembly work was completed before time plan.

In general RCP (and Markuciai) is a very professional and constructive thinking partner which is very important quality for these kinds of projects. HENT AS can therefore only give our strongest recommendations.

HENT AS
